The Multi-Grip Head Immobiliser

from

SP Services (UK) Ltd

Presented by...

Paul Watts, Regional Sales Manager

The Problem...

It is widely accepted that Cervical Immobilisation on an Orthopaedic Stretcher (Scoop) is problematic. Most available devices are designed for use on a Spinal Board and these are “retro-fitted” for use on a Scoop. The most common practise seems to be inverting a standard set of head blocks. Though often is the case that the head blocks are not a pair or placing them causes significant head/neck movement.

The Solution...

Features...

A complete system for your head immobilization needs. Its design makes it a universal head immobilizer. Each unit includes head and chin straps and is individually packaged in thermo-sealed film.

Benefits...

- Straps stay put, unit stays put and patient stays put
- Compatible with all C-collars and backboards
- Radiolucent
- Easy access to the ears
- Head strap sticks to board, not to skin/hair (foam covers forehead area)
- Non-claustrophobic design
- Buoyant for water rescue
- Head and chin straps come with each unit
- Can be used with motorcycle/sports helmets
- Closed-cell foam

Multi-Grip Head Immobiliser (ST/097A)
